

CALL FOR PAPERS

Dear Scientist,

EXCLI Journal, a free online Journal (<http://www.excli.de>), invites original articles, review articles and case reports for publication. EXCLI J presents a broad range of articles in the field of experimental and clinical research. Therefore, EXCLI J welcomes papers which bridge disciplines and may not suit the narrow specialism of other journals. Although the general emphasis is on biological and medical sciences, physical and chemical aspects are also invited.

EXCLI J offers some attractive services for scientists:

- **Free access** to full text articles as the journal is managed by the Leibniz Research Centre for Working Environment and Human Factors, Dortmund (since 2007), formerly by the University of Mainz (2002-2007) with no commercial interest
- **Publication is free** of costs for scientists
- **Color pictures** are also published **free** of costs
- **Online submission and reviewing process**
- Publication is rapid: EXCLI J guarantees a **decision** by two referees within **20 days** after the manuscript is received.
- **Fast track** system: Many authors may feel their data should be published even faster. EXCLI J will agree to a manuscript entering fast-track when this is requested by the authors. In this case EXCLI J is prepared to give a **decision within 7 days**. However, the rate of rejections is higher for the fast track.
- First submissions of manuscripts may be done in any format. For instance, it is not necessary to format references in the style of EXCLI J. As soon as a manuscript is accepted the authors may format their article in the style of EXCLI J. We guarantee publication within 7 days as soon as we receive an accepted, correctly formatted manuscript.
- Although the majority of our articles does not exceed 10 pages there is **no limitation of space**. Long articles and extensive reviews are also welcome. Also extensive descriptions of Materials and Methods that facilitate reproduction of experiments as well as additional materials (films, simulations, original data sets) may be published by EXCLI J.
- EXCLI J is a new journal. Nevertheless, the average **citation rate** of an article published since our foundation in December 2002 and February 2005 is **2.4 citations per article** considering exclusively citations indexed by **ISI Web of Science**.
- **Areas of interest** of EXCLI J include: Biochemistry, Biomedical Research, Biology, Cell Biology, Clinical Studies, Developmental Biology, Genetics, Immunology, Legal Medicine, Molecular Biology, Neurobiology, Oncology, Pharmacology, Plant Biology, Proteomics, Systems Biology, Toxicology.

Sincerely,

L. Sacha Weilemann, Marc-A. von Mach, Jan G. Hengstler (editors)
