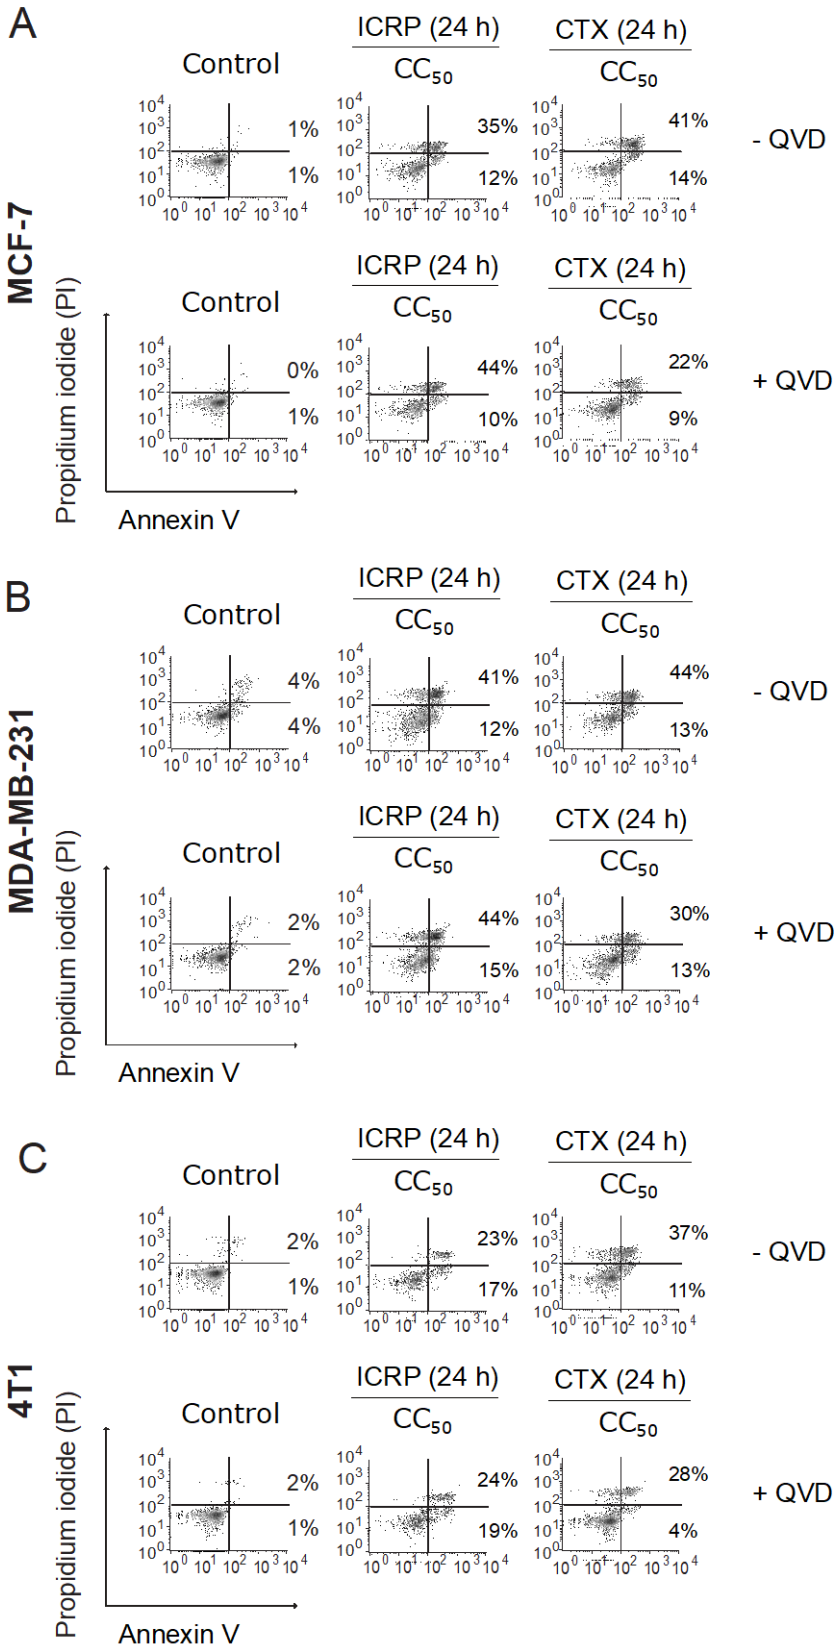
Supplementary Figure 1: A) MCF-7, **B**) MDA-MB-231 and **C**) 4T1 cells were treated for 24 h. Flow cytometry was used to measure cell death analyzed by AnnV/PI staining. Representative dot plots from at least three independent experiments.

EXCLI Journal 2023;22:131-145 – ISSN 1611-2156
Received: September 11, 2022, accepted: January 09, 2023, published: January 13, 2023



Supplementary Figure 2: Representative dot plots of cell death obtained by AnnV/PI of **A**) MCF-7, **B**) MDA-MB-231 and **C**) 4T1 cells pre-treated in presence or absence of QVD, and then treated with ICRP CC_{50} or CTX CC_{50} for 24 h, using flow cytometry.

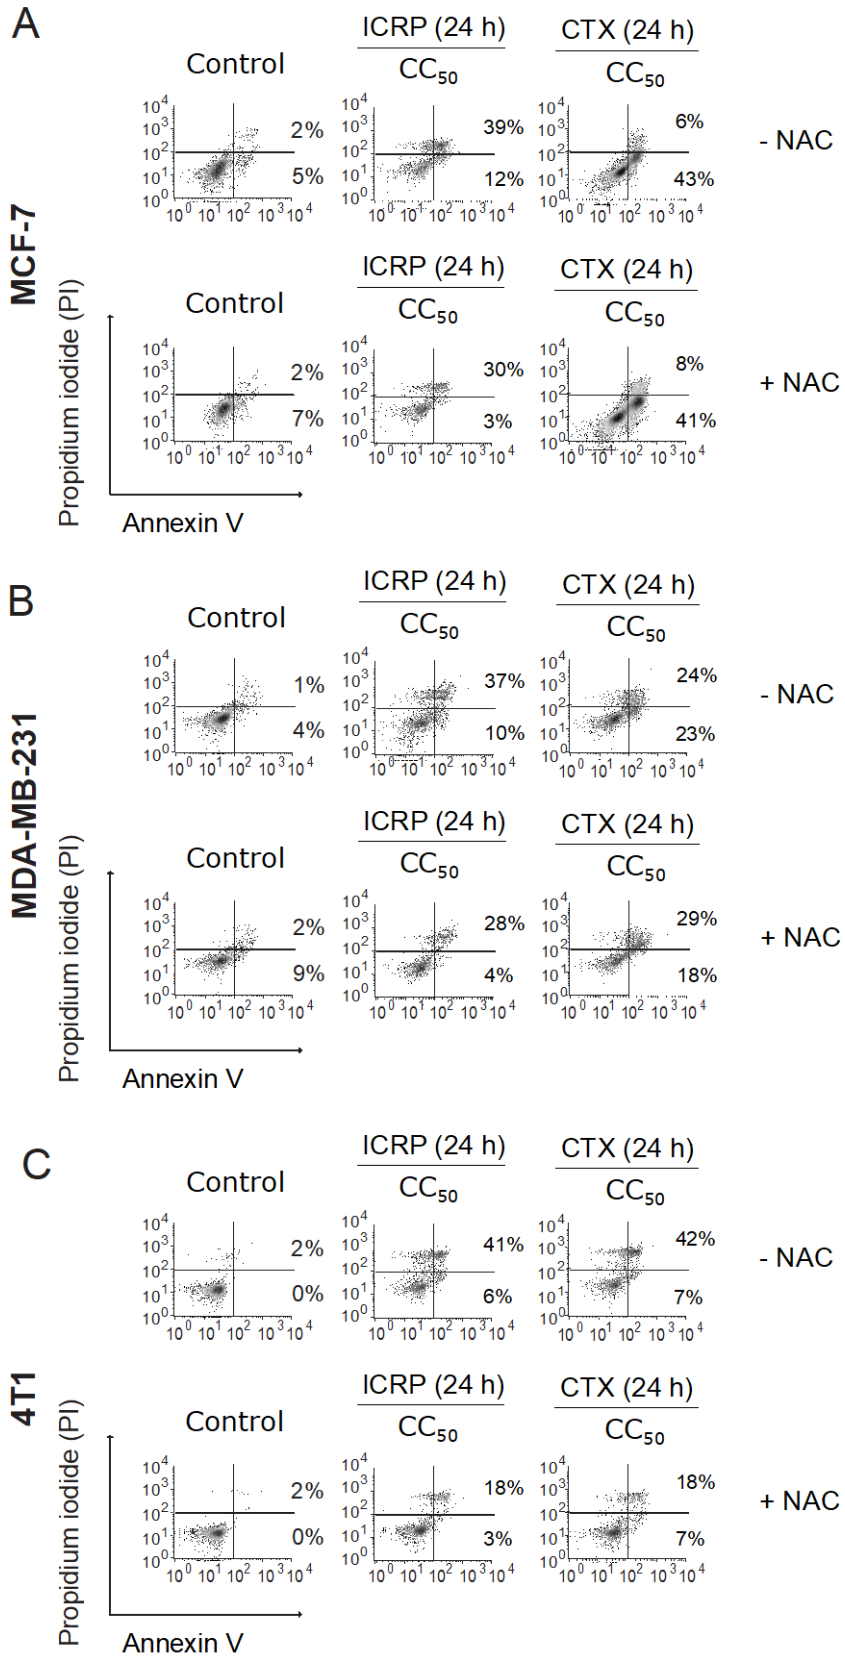
Received: September 11, 2022, accepted: January 09, 2023, published: January 13, 2023



Supplementary Figure 3: Representative dot plots of cell death obtained by AnnV/PI of **A**) MCF-7, **B**) MDA-MB-231 and **C**) 4T1 cells pre-treated in presence or absence of NAC, and then treated with ICRP CC_{50} or CTX CC_{50} for 24 h, using flow cytometry.

Supplementary Figure 4: PBMC obtained from healthy donors were treated with CC_{20} or CC_{50} of ICRP or CTX for 24 h and cell death was evaluated by AnnV/PI staining using flow cytometry. **A**) Dot plots are representative of means of triplicates from at least three independent experiments.
