Table S1: Result of multivariable linear regression analysis of relative telomere length (dependent variable) vs parental consanguinity and age of participants (independent variables)

	Unstandardized coefficients		Standardized coefficients	t	p
	B	SE	β		
Constant	8.238	1.127	-	7.31	<0.001
Parental consanguinity*	- 0.277	0.293	- 0.086	- 0.94	0.346
Age	- 0.065	0.034	- 0.174	- 1.91	0.059

*Unrelated and first cousin marriages were coded 0 and 1, respectively.
For fitted model: $F=2.26$, $df=2, 116$; $p=0.109$
