Supplementary Table 1: List of all regulated proteins in both treatment groups. Proteins were isolated from HepaRG cells incubated with 33 or 100 nM OA for 24 h. Proteins were then separated using 2D gel electrophoresis and deregulated proteins were identified using MALDI-MS. Deregulation of individual proteins by OA in mouse intestine (Wang et al., 2012) and in mouse liver (Wang et al., 2021) is presented in the row "comparison with published data": 1, mouse ortholog of detected protein deregulated in Wang et al., 2012; (1), similar protein isoform deregulated in Wang et al., 2012; 2, mouse ortholog of detected protein deregulated in Wang et al., 2021; (2), similar protein isoform deregulated in Wang et al., 2021.

Protein symbol	UniProt Accession number	Protein name	OA 33 nM		OA 100 nM		Comparison with published data

Supplementary Figure 1: MTT-assay of selected OA concentrations on HepaRG cells. Cells were seeded in 96-well plates and grown for 14 days, after which they were differentiated for another 14 days. They were incubated for 24 h with different OA concentrations. The absorption at 570 nm was measured and directly compared to the viability. Each sample was then compared to an untreated control. Based on the MTT assay, 100 nM and 33 nM OA were picked as non-toxic concentrations. Statistical analysis was performed using t-test (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$).
